

UPDATE 29 August 2018

Groups Preset 2D Plan View

This new View should help when recording Presets and Cues without the lights as it'll show what's happening to the lights/fixtures whilst programming. I've included it on the show data (the Onyx Show file) on the website.

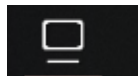

You will also note the only real difference to the software is the Quick Menu button now looks different. As you can see it now looks like this:-

The shortcut on the desktop looks like this

And on the taskbar looks like this

Why not download the software and have a play?
